- Codercise I.12.1 — Entangling Operations
- Codercise I.12.2 — Separable or entangled?
- Codercise I.12.3 — Controlled rotations
- Codercise I.13.1 — The imposter CZ
- Codercise I.13.2 — The SWAP gate
- Codercise I.13.3 — The Toffoli gate
- Codercise I.13.4 — Mixed Controlled Gates
- Codercise I.13.5 — The 3-controlled-NOT
- Codercise I.14.1 — The Bell states
- Codercise I.14.2 — Quantum Multiplexer
- Codercise A.1.1 — Create a uniform superposition
- Codercise A.2.1 — The matrix form of the oracle
- Codercise A.2.2 — The oracle in the circuit
- Codercise A.3.1 — The oracle in the circuit
- Codercise A.3.2 — Breaking the lock a bit faster
- Codercise A.4.1 — The multi-solution oracle
- Codercise A.4.2 — Checking the parity of a lock
- Codercise A.5.1 — Hadamard-oracle-Hadamard sandwich
- Codercise A.6.1 — The Hadamard transform for multiple solutions
- Codercise A.6.2 — The Deutsch–Jozsa algorithm
